

TRAMPOLINE SPRINGCARE

THE INNOVATION THAT CHANGES EVERYTHING:
THE TRAMPOLINE WITHOUT SPRING

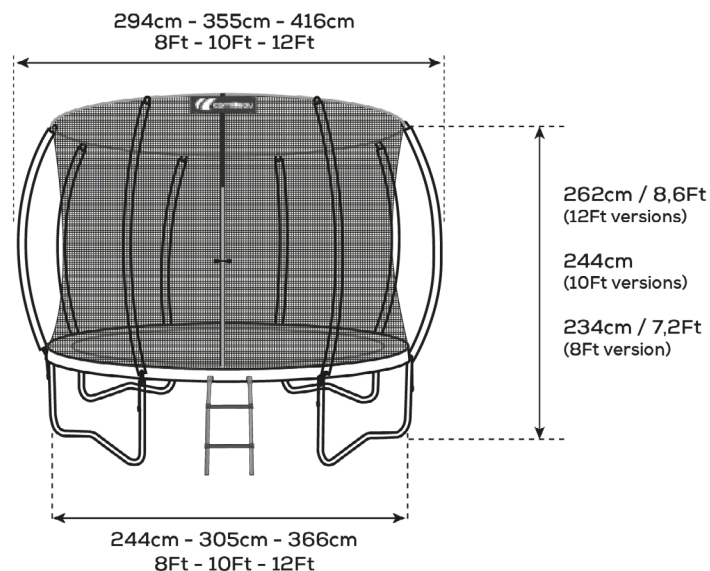

The propulsion system of the Springcare trampoline is unique and patented. The traditional springs are replaced by a dense mesh of elastics composed of a multitude of microfilaments. This innovation offers many advantages, not only in terms of safety but also in terms of comfort, with a rebound that puts less strain on the joints. To ensure its durability, each part has been rigorously tested in the Cornilleau laboratories so that the Springcare trampoline retains its qualities even after thousands of uses.
